1 Ratio of Correlation to Regression 1

1 Ratio of Correlation to Regression

Given:

$$b = \frac{\sum_{i=1}^n (x_i - \bar{x})(y_i - \bar{y})}{\sum_{i=1}^n (x_i - \bar{x})^2} \quad (1)$$

and:

$$r = \frac{\sum_{i=1}^n (x_i - \bar{x})(y_i - \bar{y})}{\sqrt{\sum_{i=1}^n (x_i - \bar{x})^2 \sum_{i=1}^n (y_i - \bar{y})^2}} \quad (2)$$

find a simplified form for $\frac{b}{r}$

let $f(x) =$

$$\sum_{i=1}^n (x_i - \bar{x})(y_i - \bar{y}) \quad (3)$$

then $\frac{b}{r} =$

$$\frac{\frac{f(x)}{\sum_{i=1}^n (x_i - \bar{x})^2}}{\frac{f(x)}{\sqrt{\sum_{i=1}^n (x_i - \bar{x})^2 \sum_{i=1}^n (y_i - \bar{y})^2}}} \quad (4)$$

$$\Rightarrow \frac{b}{r} = \frac{f(x)}{\sum_{i=1}^n (x_i - \bar{x})^2} \frac{\sqrt{\sum_{i=1}^n (x_i - \bar{x})^2 \sum_{i=1}^n (y_i - \bar{y})^2}}{f(x)} \quad (5)$$

$$\Rightarrow \frac{b}{r} = \frac{\sqrt{\sum_{i=1}^n (x_i - \bar{x})^2 \sum_{i=1}^n (y_i - \bar{y})^2}}{\sum_{i=1}^n (x_i - \bar{x})^2} \quad (6)$$

$$\Rightarrow \frac{b}{r} = \frac{\sqrt{\sum_{i=1}^n (x_i - \bar{x})^2} \sqrt{\sum_{i=1}^n (y_i - \bar{y})^2}}{\sum_{i=1}^n (x_i - \bar{x})^2} \quad (7)$$

$$\Rightarrow \frac{b}{r} = \frac{(\sum_{i=1}^n (x_i - \bar{x})^2)^{\frac{1}{2}} \sqrt{\sum_{i=1}^n (y_i - \bar{y})^2}}{\sum_{i=1}^n (x_i - \bar{x})^2} \quad (8)$$

$$\Rightarrow \frac{b}{r} = \left(\sum_{i=1}^n (x_i - \bar{x})^2 \right)^{\frac{1}{2}} \left(\sum_{i=1}^n (x_i - \bar{x})^2 \right)^{-1} \sqrt{\sum_{i=1}^n (y_i - \bar{y})^2} \quad (9)$$

$$\Rightarrow \frac{b}{r} = \left(\sum_{i=1}^n (x_i - \bar{x})^2 \right)^{-\frac{1}{2}} \sqrt{\sum_{i=1}^n (y_i - \bar{y})^2} \quad (10)$$

$$\Rightarrow \frac{b}{r} = \frac{\sqrt{\sum_{i=1}^n (y_i - \bar{y})^2}}{\sqrt{\left(\sum_{i=1}^n (x_i - \bar{x})^2 \right)}} \quad (11)$$

$$\Rightarrow \frac{b}{r} = \sqrt{\frac{\sum_{i=1}^n (y_i - \bar{y})^2}{\sum_{i=1}^n (x_i - \bar{x})^2}} \quad (12)$$
